Ms. Lizette Castelline has been named principal of Cobb Elementary School for the 2018-2019 school year. Ms. Castelline earned her Bachelor of Science in Mathematics from Texas Southern University and her Master of Science in Educational Management from the University of Houston-Clear Lake. Ms. Castelline began her teaching career in 2007 at Patrick Henry Channelview High School's Pep Band provided entertainment during LyondellBasell's groundbreaking of the world's largest PO/TBA plant, on August 22, 2018. Experts from LyondellBasell provided a question and answer session for students.

It's been one year since Hurricane Harvey devastated the Greater Houston Area. Today we recall the heroic efforts of our community, and we reflect on the events that led Channelview ISD Superintendent Mr. Greg Ollis to open Channelview High School as a shelter.

As the flood waters pushed residents from their homes and onto underpasses of bridges along Beltway 8, Precinct 3 duties required a safe haven. Without hesitation, Mr. Ollis rallied the troops, and within hours, the Channelview shelter was opened. Residents of communities including Channelview, Galena Park, Sheldon, and Crosby were welcomed to the Channelview shelter. It is reported 600 people received aid, including students, administrators, employees, school board members and community members were present to assist with shelter operations.

Channelview ISD transported residents to shelters throughout the city. Channelview ISD Nutrition Department reported 2,141 meals were served and additional meals were provided by contributions from local restaurants. In addition to local efforts, Channelview ISD bus drivers shuttled residents from the local Walmart parking lot to NRG and the George R. Brown Convention Center.

"The Channelview shelter was a community effort. When the decision was made to open Channelview High School as a shelter, we received numerous donations of baby items, food, clothing, and toiletries," said Mr. Ollis. "As we worked to support residents, volunteers came without hesitation, and we received stories of housing arrangements made in the area and family reunification plans. We are appreciative of our Channelview community for their outpouring of support during Hurricane Harvey."

How many Americans are finding affordable housing

(Staff/Opinion) With the cost of housing continuing to rise faster than wages, it’s no wonder that many Americans nationwide are struggling to make ends meet. Luckily, solutions already exist to affordable housing for any expert.

For example, more than 22 million people – or 9.5% of the nation’s population – are living in manufactured housing, according to the Manufactured Housing Institute (MHI). In many parts of the country, homes like these are the least expensive form of housing available. The cost to buy a manufactured home averages about $50,000, with $28,000 for a single-family site-built home, not including land costs. In response to growing market demand, almost 93,000 homes were sold in the U.S. in 2017, an approximately 15% increase over 2016, according to MHI, but this is still not enough new affordable homes to meet growing market demand for these homes.

Advocates say manufactured homes are an effective solution for many communities, according to experts. Advantages of manufactured homes include space-saving designs, common in communities with limited land, and net-zero energy construction, which reduces the cost of electricity and heating and cooling expenses. In fact, the cost to build manufactured homes averages about $70,600, compared to $286,000 for a single-family site-built home, not including land costs.

A federal study by the Department of Energy found that homes built to a standard for energy efficiency and safety standards for quality construction include features that today’s manufactured homes do far more than just reduce energy costs. Often situated in communities with high energy costs, today’s manufactured homes can save homeowners up to 40% on energy costs. Stingy, but effective.

Schools rated for readiness

State Education Commissioner Mike Morath announced Aug. 21 that Texas public schools had completed the first year of the Texas Education Agency’s accountability system for schools. The school readiness system, which includes multiple indicators of a school’s performance, makes the state’s 1,005 districts eligible for federal funding.

The system is designed to provide schools with information to help them improve and make decisions about their programs. The system is based on five criteria: performance, career and technical education, health and safety, and educational opportunity.

In response to Call for a Quote

The Midland Metropolitan Planning Organization (MPO) received the monthly lowest unemployment rate in Texas for the month of June. The Midland MPO statistical area with an unemployment rate of 3.1 percent. The state of Texas’ seasonally adjusted rate was 4.0 percent for June. The state’s seasonally adjusted rate was 3.1 percent for July.

Dismantle for notes

State Comptroller Glenn Hegar said this month that he will begin dismantling the state’s 77th biennial Legislative Budget and Finance Committee’s 2013 Legislative Appropriations Bill. The budget committee’s report includes a recommendation that the state’s transportation system should be restructured to make it more effective and efficient. The report also includes a recommendation that the state’s transportation system should be restructured to make it more effective and efficient.

After Hurricanes Harvey, Oregon State University’s Department of Environmental and Molecular Toxicology research team to Houston, to ascertain the threat to human health from exposure to toxins in the water, soil and air. They worked with Texas A&M, and TRA to gather the results.

Data was collected by using passive wristband samplers to determine personal chemical exposure after the flooding. These wristbands can measure up to 1,530 different chemicals. 41 Superfund sites in Houston were affected by the hurricanes, and 13 of these were flooded.

Although the study was conducted throughout the Houston area, a subset of 32 people were recruited from the Highlands area, and of these 27 returned their wristbands and had them analyzed.

Researchers looked for 1,530 chemicals found in several different chemical classes. Some chemicals are included in more than one class. For example, triclosan is found in personal care products, flame retardants and personal care products. Industrial chemicals include phthalates, commonly found in plastics. An average of 28 chemicals were detected in each wristband. The lowest was 12 chemicals in the wristband and the highest was 43 chemicals in a wristband.

People were mostly exposed to endocrine disruptors, followed by industrial chemicals and chemicals found in personal care products.

Endocrine disruptors are chemicals that can upset the hormone balance in living organisms. These chemicals can be found in everyday products.

The research team cautioned that currently there are no regulations for many of these chemicals. As a result, it is difficult to know how much of a chemical is needed to cause health effects.

The research team concluded that currently there are no regulations for many of these chemicals. As a result, it is difficult to know how much of a chemical is needed to cause health effects.

KTB/A Channelview Airline crew
plant is planned for 2021. “Today's groundbreaking is an historic moment for our company,” said Bob Paul, CEO of LyondellBasell. “Our.PO/TBA plant is the largest of its kind, built to meet the rising global demand for ultrathin films by billions of consump- ers each day and clean and cost-sav- ing materials that will help improve air quality around the world. Construction of this project will provide jobs for our neighbors, support local businesses and strengthen our communities with increased tax revenue across the Greater Houston region. As part of the construction of our global growth strategy, the new plant will strengthen our role in Houston and gener- ate long-term value for our shareholders.”

To optimize product balances and realize synergies between Lyondell-Basell sites, two facilities will be constructed on- site manufacturing bays. The 140- acre PO/TBA plant will be built at the LyondellBasell Channelview Complex, located in Channelview, Texas while an associated 36-acre extrusion will be built at the company’s surrogate Complex in Pana- down, Texas.

The company chose to build the new plant at these existing locations because of the unique history and because of their proximity to our existing plants and their ability to transport infrastructure and raw materials to products to markets around the globe.

“As the Congresswoman representing the largest petrochemical and refining complex in North America, I welcome the news about the construction of these new PO/TBA facilities in LyondellBasell’s Channel- view andRaster projects. These $1 billion facilities are not only an expansion of LyondellBasell, but an investment in the future of our communities along the Texas Gulf Coast,” said U.S. Representative Brian Balanoff (D-TX). “The several billion pounds of PO/TBA products that will be produced at these facilities will make the way for more local jobs, economic growth and re- sidential expansion over the coming decades and be-

ment to the area and further solidifies our posi- tion as a global petrochemi- cal and manufacturing hub.”

The project will create more than 3,000 construc- tion and 160 permanent positions. Based on an analysis by the Greater Houston Part- nership, LyondellBasell’s PO/TBA project is estimated to generate more than $233 million in new tax benef- its for the county, school district, community colleges and other local taxing dis- tricts over a 30-year period.

The Channelview site is expected to deliver more than $90 million in tax benefits and the Pasadena site is ex- pected to create $34 million in benefits.

“We value our relationships with industry and are pleased LyondellBasell has chosen to continue to invest in our region with this project, which will bring tremendous benefits to our local economy and workforce,” said Harris County Judge Ed Emmett. “The construction of this world-scale facility in Har- ris County is a testament to LyondellBasell’s com- Green trees immigrant kids facility on I-10, CONTINUED FROM PAGE 1

live in dormitories, one person per floor, and oc- cupy their time with classe- rom work, recreation, and other educational activi- ties that alarmed him, said he and that the children will be taken care of.

In addition to recreation on the property, the kids are also a nearby county park named Gene Garza Park. The Harris County Parks and Recreation Commission at that time, Nelia Garza. They also have a soccer field on the property, he said. The children do not have to go to that part of the children he spoke with, and said they came from Central American countries, namely Guatemala, El Salvador, and even a few from Mexico or Honduras.

Asked what he would do if the children of these nation- indi- cated the facility was acceptable as is, but the real problem was federal policy placing children from their par- ents, he added that there are Shelters here that can be used by a federal agency in charge of their future.

Senator Garcia said, “It is time for us to take action on the next step in this family separation policy, it’s that they need to provide proper family reunite- ment services at the beginning.” Garcia added, “Ninety- two percent of the families are reconnected. We think the proper family reunite- ment services should be provided at the beginning.”

The House of Representatives passed the bill, but the Senate did not take action.

State Representative Ana Hernandez (D-Cham-favel) rep- uted to work with law- makers and allow extra or extra re- entry in a red flag and a clear signal that the sober- ty of the children in care is one in the interest of the Trump Administration and its endeavors from the standpoint of sentencing. The Senate will only strengthen our commitment to the con- stitutional right to a speedy trial and the prosecution of the matter.

LyondellBasell will sell the PO/TBA and derivatives products to both domestic and global customers, while the shipment will be primarily sold into Latin America and Asia. A por- tion of the TBA will remain in the domestic market in the form of high purity aromatic applications which is seen in textile and healthcare. The majority of the products will be exported via the Houston Ship Channel.
